

## TUNNEL DAMPERS

- Multileaf dampers are available in a variety of constructions. If required a number of basic moduls can be used to form a multiple damper assembly.
- Made of steel or stainless steel.
- Bearings are manufactured exclusively made of stainless steel or special bearing materials.

### Description

---

In normal operation, the dampers are used to control the volumetric air flow rate extracted from the tunnel.  
In the event of a fire, the dampers near the seat of the fire are fully opened automatically immediately after detection of the fire.

### Technology

---

square, rectangular

W: max. 2,000 mm

H: max. 2,000 mm
